

Atlanta
Poultry Plastic Flooring

“Produce Healthier & Profitable Chicken”

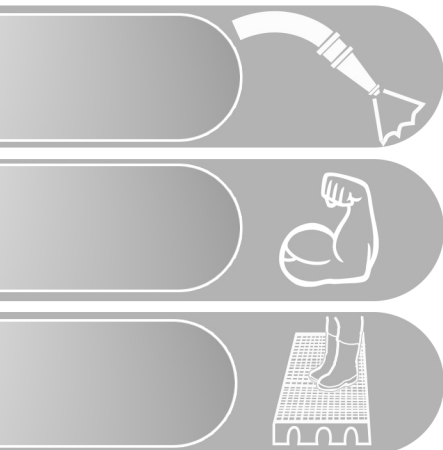

Introduction

Atlanta Poultry Plastic Flooring

Plastic poultry floorings are becoming widely used in the poultry industry to replace the traditional floorings made of wood or wire slats in poultry breeding houses. Poultry floorings made out of high-impact polypropylene material provides superior impact and wear resistance. It reduces foot pad problems, leg problems, and breast blisters that chickens experienced with wood slats. The plastic flooring is more durable and will easily outlast wood slats. And unlike wire slats, plastic poultry floorings are rot/corrosion proof, and the plastic material resists microorganism build up and sheds waste easily.

Advantages

Cleanability

Non-porous smooth surface and 1.1" x 1.1" openings can cut cleaning time in half compared to wood slats. The large openings also allow the birds to continually work the manure through the openings to maintain a clean environment.

Rot-proof/Non-porous

Our solid plastic construction is rot/corrosion proof, resists microorganisms build up and sheds waste easily.

Performance

Atlanta Poultry Matting reduces foot pad problems, leg problems, and breast blisters experienced with wood slats. It will easily outlast wood slats.

👍 Durable

👍 Easy to clean & disinfect

👍 Lightweight

👍 Corrosion & rustproof

👍 Long life span

👍 No microorganism build-up

👍 High impact resistance

👍 Heavy load resistance

👍 Provide ventilation

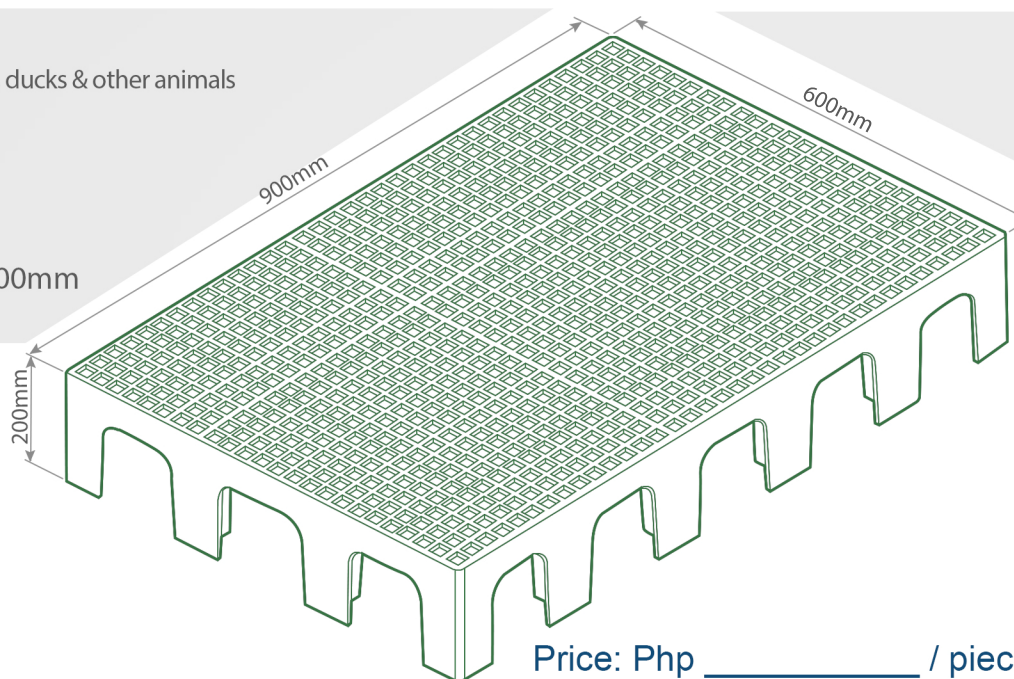

Application For pigs, goats, chicken, ducks & other animals

Specification

Colour : white & green

Material : polypropylene

Dimensions : 900mm x 600mm x 200mm

Price: Php _____ / piece
