Sikasil SG-500 CN

Two-part structural silicone adhesive

Technical product data

Technical product data			
Properties		Component A Sikasil SG-500 CN A	Component B Sikasil SG-500 CN B
Chemical base		2-C silicone	
Color	(CQP ¹ 001-1)	White	Black
Color mixed		Color mixed	
Cure mechanism		Polycondensation	
Cure type		Neutral	
Density	(CQP 006-4)	1.4 kg/L approx.	1.08 kg/L approx.
Density mixed		1.38 kg/L approx.	
Mixing ratio	A:B by volume	10:1	
	A:B by weight	13:1	
Viscosity	(CQP 029-6)	1'200 Pa⋅s approx.	300 Pa⋅s approx.
Consistency		Paste.	
Application temperature		5°C - 40°C (40°F - 105°F)	
Snap time ²	(CQP 554-1)	60 min. approx.	
Tack-free time ²	(CQP 019-1)	270 min. approx.	
Shore A-hardness	(CQP 023-1 / ISO 868)	40 approx.	
Tensile strength	(CQP 036-1 / ISO 37)	2.0 N/mm ² approx.	
Elongation at break	(CQP 036-1 / ISO 37)	350% approx.	
Tear propagation resistance	(CQP 045-1 / ISO 34)	4 N/mm approx.	
100% modulus	(CQP 036-1 / ISO 37)	1.0 N/mm ² approx.	
12.5% modulus	(CQP 036-1 / ISO 37)	0.2 N/mm ² approx.	
Movement accommodation ca 719)	apability (ASTM C	±12	5%
Thermal resistance	(CQP 513-1)		
4 hours		200°C (390°F) approx.	
Short term	1 hour	220°C (430°F) approx.	
Service temperature		-40°C to 150°C approx. (-40°F to 300°F)	
Shelf life (storage below 25°C	(CQP 016-1)	15 months	12 months

Description

Sikasil SG-500 CN is a two-part, high-modulus, neutral-curing structural silicone adhesive.

Sikasil SG-500 CN is manufactured in accordance with ISO 9001/14001 quality assurance system and the responsible care program.

Product Benefits

- Meets requirements of ASTM C 1184, ASTM C 920
- Broad adhesion range
- Resistant to UV and weathering
- Long term durability
- Quality product based on proven and constant quality raw materials

Areas of application

Sikasil SG-500 CN is ideal for structural glazing and similar high-demanding industrial applications. This product is suitable for professional experienced users only. Tests with actual substrates and conditions have to be performed to ensure adhesion and material compatibility.

Cure Mechanism

Sikasil SG-500 CN starts to cure immediately after mixing the two components.

The speed of the reaction depends mainly on the temperature, i.e. the higher the temperature the faster the curing process. Heating above 50°C is not advisable as it may lead to bubble formation.

The mixer open time, i. e. the time the material can remain in the mixer without flushing or extrusion of product is significantly shorter than the snap time indicated above. For more information please contact the Technical Service Department of Sika Industry.

Application Limits

Most Sikasil WS, FS, SG, IG, WT, AS and other engineering silicone sealants manufactured by Sika are compatible with each other and with SikaGlaze IG sealants. For specific information regarding between various compatibility Sikasil and SikaGlaze products please contact the Technical Service Department of Sika Industry. All other sealants have to be approved by Sika before using them in combination with Sikasil SG-500 CN. Where two or more different reactive sealants are used, allow the first to cure completely before applying the next. Sikasil SG, IG and WT sealants and adhesives may only be used in structural glazing or window bonding applications by experienced professionals and after a detailed examination and written approval of the corresponding project details by the Technical Service Department of Sika Industry. The compatibility of gaskets, backer rods, setting blocks and other accessory materials with Sikasil SG-500 CN must be tested in advance. The above information is offered for general guidance only. Advice on specific applications will be given on request.

Method of Application

Surface preparation

Surfaces must be clean, dry and free from oil, grease and dust. Advice on specific applications and surface pre-treatment methods is available from the Technical Service Department of Sika Industry.

Application

processing Sikasil SG-Before 500 CN both components have to be mixed homogeneously and airbubble-free in the correct ratio as indicated with an accuracy 10%. Most commercially available metering and mixing equipment are suitable. Please contact the System Engineering of Sika Industry for specific advice. While the A-part of Sikasil SG-500 CN is stable in air, the B-part is moisture-sensitive and must only be exposed briefly to air. Joints must be properly dimensioned as changes are no longer possible after construction. Basis for calculation of the necessary joint dimensions are the technical values of the adhesive and the adjacent building materials, the exposure of the building elements, their construction and size as well as external loads. For more information please contact the Technical Service Department of Sika Industry.

Tooling and finishing

Tooling and finishing must be carried out within the snap time of the adhesive. No tooling agents must be used.

Removal

Uncured Sikasil SG-500 CN may be removed from tools and equipment with Sika Remover-208 or another suitable solvent. The static mixer of the metering and mixing equipment can be cleaned with Sika Mixer Cleaner. Hands and exposed skin should be washed immediately usina Sika® Handclean towels or a suitable industrial hand cleaner and water. Do not use solvents!

Overpainting

Sikasil SG-500 CN is an elastic adhesive and cannot overpainted.

Further Information

- General Guidelines "Structural Silicone Glazing with Sikasil Adhesives"

Packaging information

Drum (Comp. A)	260 ka
Pail (Comp. B)	20 kg

Value Bases

All technical data stated in this Product Data Sheet are based on laboratory tests. Actual measured may vary due data to circumstances beyond our control.

Health and Safety Information

information and regarding transportation, handling, storage and disposal of chemical products, users shall refer to the actual Material Safety Data Sheets containing physical, ecological, toxicological and other safetyrelated data.

Legal Notes

The information, and, in particular, the recommendations relating to the application and end-use of Sika products, are given in good faith based on Sika's current knowledge and experience of the products when properly stored, handled and applied under normal conditions in accordance with Sika's recommendations. the differences practice, in materials, substrates and actual site conditions are such that no warranty in respect merchantability or of fitness for a particular purpose, nor any liability arising out of any legal relationship whatsoever, can be inferred either from this information, or any written recommendations, or from any other advice offered. The user of the product must test the product's suitability for the intended application and purpose. Sika reserves the right to change the properties of its products. The proprietary rights of third parties must be observed. All orders are accepted subject to our current terms of sale and delivery. Users must always refer to the most recent issue of the local Product Data Sheet for the product concerned, copies of which will be supplied on request.
